QUARTERLY FLAX MARKET REVIEW

UNITED STATES FLAXSEED CRUSHINGS LARGEST IN TWELVE YEARS

Reflecting expansion of industrial activity and increased demand for linseed oil, flaxseed crushings in the United States during the October-December quarter were the largest for any corresponding period since the 1928-29 season and totaled 10,083,000 bushels, according to the Federal-State Market News Service. This compares with 8,736,000 bushels during the same months last season and an average of 6,949,000 bushels for the five-year period, 1934-35 to 1938-39. Crushings so far this season (July through December) totaled 17,026,000 bushels against 15,550,000 bushels during the first half of the 1939-40 season and 12,521,000 bushels the previous five-year average.

The bulk of U. S. crushings for the season to date apparently represented domestic flaxseed. Imports increased slightly during the second quarter but brought the total since July 1st up to only 3,878,000 bushels compared with 5,265,000 bushels July through December last season and 8,381,000 bushels the average for the previous five-year period. The smaller imports this season largely reflected the sharp increase in domestic supplies which obviated need for usual purchases of foreign seed.

Despite the increased crushings and falling off in imports, January 1st commercial supplies were almost double the relatively large stocks at the corresponding date last year. Commercial supplies at the beginning of the season apparently were the largest in sixteen years and amounted to 33,138,000 bushels. Adding imports of 3,878,000 bushels and deducting crushings of 17,026,000 bushels July through December points to January 1st stocks of 19,990,000 bushels. This compares with 10,265,000 bushels at the corresponding date last year and 4,723,000 bushels two years back.

Distribution of linseed oil was well maintained during the second quarter and amounted to 153,509,000 pounds. This brought the total for the season since July 1st up to 306,645,000 pounds against 288,287,000 pounds during the corresponding six months last season and 241,674,000 pounds two years back.
